

NAF Professional Ethics

Course Scope and Sequence

July 2016

This course gives students a solid understanding of the role ethics holds across the professions. It develops students' ability to evaluate ethical issues with reason and logic, and it gives them the tools they need to resolve ethical dilemmas that they will encounter during their careers. Employers today are actively looking for employees with these skills.

An introduction to the philosophies that have informed ethical reasoning since antiquity helps students to realize that thinking through ageless questions such as "what is justice?" and "what does being an ethical person really mean?" is the first step to discovering what they value and how they can use ethics to guide them in their careers. Students then explore the qualities that characterize an ethical professional.

Students practice using a decision-making framework to locate the underlying question that must be answered to resolve a range of ethical dilemmas. They practice using the ethical theories and framework they have learned to propose solutions to ethical issues presented as case studies. With these ethical tools on hand, students investigate ethics in the workplace, the kinds of ethical problems that employees frequently confront, and the systems that protect employees from such unethical practices as discrimination and unlawful termination.

Students see that management has a different set of ethical challenges. They consider the relationship between obedience and authority and analyze the qualities of effective leaders, as well as the ways managers can inspire ethical behavior and create an ethical workplace culture.

Students learn about ethical issues specific to online professional communication and digital professional etiquette. They expand their investigation to look at corporate ethics and the ethics of marketing before delving into the ethical landscape of the industry they are preparing to enter. Their culminating projects require students to bring the knowledge and skills they have developed in this course to bear on a serious ethical issue that their industry faces today. Students work in groups to present their findings and proposed solutions to an audience of industry professionals. Alternatively, they participate in an ethics bowl to exhibit their skills with reasoning and productive discussion.

This course is expected to take a total of 67 50-minute class periods.

Unit 1: Introduction to Ethics

Lesson 1: Course Introduction

Estimated # of Class Periods: 4

Learning Objectives

- Infer the skills and knowledge about ethics needed to be successful in an authentic project
